

Mohammed Ragheb Omer

ASP.NET Core Backend Developer

contact@mohamedragheb.dev • +201002608684 • Damietta, Egypt

[GitHub](#) • [LinkedIn](#) • [Portfolio](#)

Summary

ASP.NET Core Backend Developer specializing in building secure, scalable APIs and robust systems using Clean Architecture. Proficient in advanced SQL Server database design, T-SQL, and delivering high-performance, real-world applications with complex business logic.

Education

Bachelor of Computer Science at East Port Said National University, East Port Said, Egypt **October 2025 - Present**

Grade: 3.16 (after first semester)

Skills

Backend Development: C#, ASP.NET Core Web API, RESTful APIs, Entity Framework Core, Clean Architecture, Authentication & Authorization (JWT), Dependency Injection, Middleware, LINQ, Logging, Auditing.

Database: SQL Server, T-SQL, Database Design

Desktop Development: WinForms / WPF Desktop Development, .NET Framework 4.8

Tools & Technologies: Git & GitHub, Postman, Swagger/OpenAPI, Visual Studio 2022/2026, SSMS 2022

Soft Skills: Problem Solving & Debugging, Strong Analytical Thinking, Team Collaboration, Effective Communication, Attention to Detail, Continuous Learning, Time Management

Projects

DVLD — Driving & Vehicle License Department • [GitHub](#)

February 2026 - April 2026

DVLD is a comprehensive desktop application developed to manage the full lifecycle of driving licenses, including multi-stage testing, financial transactions, and regulatory compliance. It ensures road safety by strictly enforcing legal requirements through a sophisticated business logic layer.

- Designed normalized database schema with relationships and constraints.
- Built stored procedures to handle complex business logic directly at the database level.
- Developed a multi-layered validation engine to automate license eligibility checks and eliminate duplicate applications.
- Enforced age and license-class eligibility rules while preventing duplicate or conflicting applications.

SMS — Supermarket Management System • [GitHub](#)

April 2026 - May 2026

SMS is a layered backend system for managing supermarket operations, including authentication, authorization, auditing, sales, returns, customer accounts, inventory, and financial ledger tracking. The system was designed with scalability, maintainability, and security in mind using clean layered architecture principles.

- Implemented a role-based and entity-level permission system using bitwise operations for fine-grained authorization.
- Applied JWT-based authentication with secure password hashing and session management.
- Designed a clean, scalable layered architecture separating Domain, Application, and Infrastructure concerns.
- Developed full sales and return workflows including inventory updates and financial calculations.
- Designed a fully normalized relational database supporting complex business workflows (sales, returns, customers, ledger).
